

ARCHITETTURA SONORA

CRAFTED BY SOUND

Within the intersection of design and technology,
new possibilities unfold. Architettura Sonora
explores that realm.

We believe that listening should be an experience
that captivates all the senses, transforming the way
we interact with our environments.

SPEAKERS RANGE

OMNIDIRECTIONAL

Our omnidirectional speaker range draws inspiration from the fundamental elegance of geometric shapes. By embracing the simplicity of spheres, cylinders, and cubes, we have crafted a collection that not only enriches the auditory experience with 360-degree sound coverage but also integrates seamlessly into any design aesthetic.

LIGHTING MOOD

Our omnidirectional range can be integrated with a LED light to create a symphony of auditory and visual harmony.

D I R E C T I O N A L

Our directional speaker range is meticulously engineered to harness the precision of directional sound delivery, focusing audio exactly where desired.

This approach ensures a targeted auditory experience that is both potent and controlled, perfect for environments where sound directionality is as critical as aesthetic integration.

A foundation of EXCELLENCE

At the core of every Architettura Sonora speaker is the legacy and expertise of B&C Speakers.

It is this dedication to superior sound quality, rooted in the heritage of B&C Speakers, that empowers Architettura Sonora to create environments where sound and space exist in perfect harmony.

Weaving Raw Materials into acoustic Experiences

MARBLE

Marble's natural capacity to convey sound with minimal distortion is matched only by its level of sophistication and design distinction, offering a palette of unique patterns and hues that transform each speaker into a bespoke element of interior design.

CONCRETE

This material, known for its robustness and architectural grace, is ingeniously leveraged to create speakers that not only deliver unparalleled sound quality but also stand as monuments of contemporary design.

The dense, absorptive nature of concrete allows for a cleaner sound reproduction with reduced echo, making it an exceptional medium for acoustic precision.

NO LIMITS TO CHOICE

At Architettura Sonora, customisation is at the heart of what we do, allowing every client to tailor their auditory experience to match both the acoustic and aesthetic demands of their space.

It's not just about filling rooms with sound; it's about enhancing the way we live, work, and relax, making every note and nuance a part of the room's fabric.

BEYOND WALLS: CRAFTING ACOUSTIC
EXCELLENCE FOR EVERY ENVIRONMENT

INDOOR

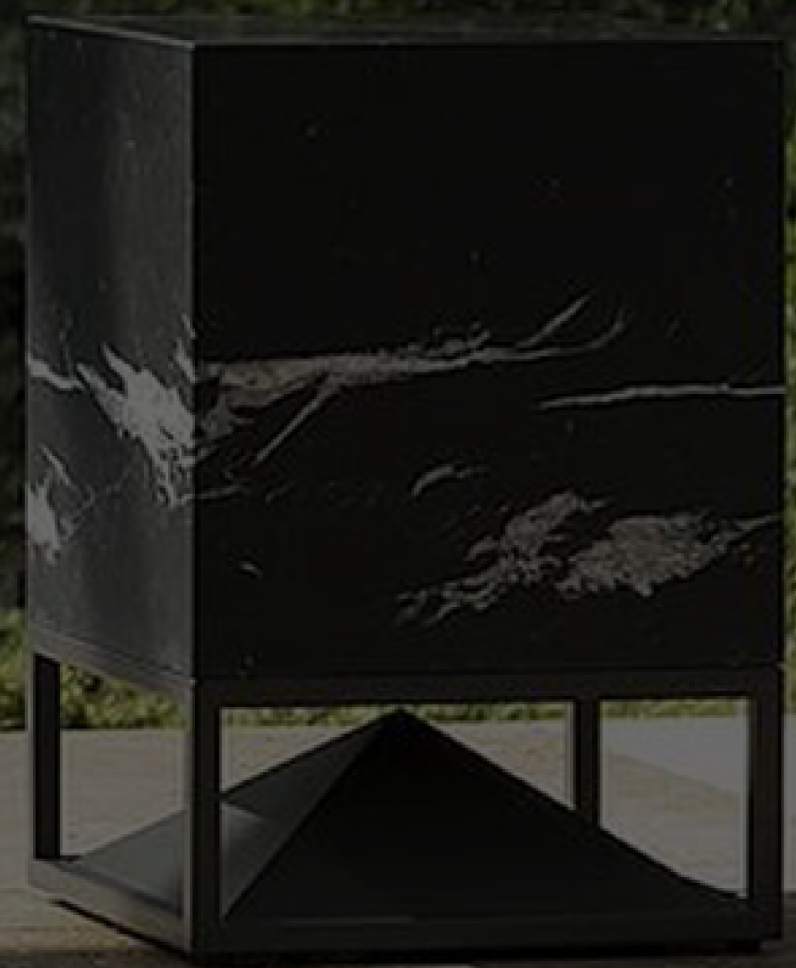

COVERED
AREAS

OUTDOOR

AS speakers are crafted to not only complement the aesthetic nuances of sophisticated interiors, but also to promise resilience and durability against the elements outdoors.
